Ibrahima Touré

Senior Full-Stack Engineer

Dakar, Senegal · open to remote and international roles
ibrahima@fluixi.com · bambiste.github.io · github.com/Bambiste · LinkedIn

SUMMARY

Full-stack engineer, eight years across TypeScript, Python and cloud infrastructure. Co-founder and CTO of Adafri, an omnichannel marketing platform on Angular and Python/Flask over Google Cloud, integrating the Google Ads API, Cloud Vision, SMS, DOOH billboards and Mobile Money. I ship across web, desktop and mobile, including a POS running today in a client's retail store. I also build **Fluixi**, my own reactive full-stack framework, which is where my depth in frontend architecture and build tooling comes from.

EXPERIENCE

Co-founder & CTO, Adafri

Dakar, Senegal · since 2020

Omnichannel marketing and advertising platform for African markets. I architected it and led its engineering.

- Built the full stack: **Angular** front end, **Python/Flask** REST backend, **Cloud Firestore** on Google Cloud.
- Integrated the **Google Ads API** end to end, campaign creation, management and automation, with OAuth account linking and token lifecycle handling.
- Built automated creative moderation on **Google Cloud Vision**: prohibited-content, text and colour detection before campaigns go live.
- Unified four delivery channels behind one campaign model: Google Ads, SMS, **DOOH billboards**, **Mobile Money**.
- Designed the data architecture, authentication, deployment pipeline and cloud infrastructure; owned technical direction as a founder.

Freelance Engineer, Commerce & Point of Sale

2026 · for Leuzma, a retail business

Full-stack commerce platform in a multi-package monorepo, covering online and physical retail.

- **Desktop POS in production**, used daily in a client's physical store, **Fluixi + Electron**.
- **Mobile POS** in **React Native**; storefront and store admin in **Fluixi + MedusaJS**.
- **MedusaJS** backend on **PostgreSQL** and **Redis**, containerised with Docker.
- Multi-store architecture, i18n and an end-to-end typed data layer.

Creator & Lead Engineer, Fluixi

Independent framework project · since Nov 2025

Fine-grained reactive, compiled full-stack web framework, **21 packages on npm**, ~108,500 lines of TypeScript, 156 test suites.

- Reactive runtime on a **TC39-signals** core; compiler lowering JSX and HTML templates to imperative DOM with reactive insertion points, no virtual DOM.
- **Streaming SSR, SSG, hydration, file routing, server functions, islands, dependency injection, code splitting, i18n.**

- Tooling: live reactive-graph devtools, TypeScript language-service plugin, CLI, Vite plugin, scaffolder. Nx + pnpm monorepo, Vitest, changesets.
- Powers a production storefront, admin and POS, and bambiste.github.io.

Bambiste Countries · 2025: zero-dependency, fully typed country dataset generated by codegen; built to replace a paid geo API.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, SQL, HTML/CSS
Frontend: Angular, React, JSX, DOM APIs, SSR/SSG, hydration, design systems, i18n
Backend: Python, Flask, Node.js, REST APIs, server functions, OAuth, auth & sessions
Data: PostgreSQL, Cloud Firestore, Redis
Cloud & infra: Google Cloud, Cloud Vision, Docker, Linux, CI/CD, Cloudflare
Commerce: MedusaJS, multi-store architecture, POS, Mobile Money payments
Build & tooling: Vite, Babel, SWC, pnpm, Nx, changesets, Vitest, monorepos
Desktop & mobile: Electron, React Native · Flutter (basic)

EDUCATION

ESMT, École Supérieure Multinationale des Télécommunications, Dakar, Senegal · 2016 – 2019
Bachelor's programme, Distributed Application Development (DAR)

Languages: French (native) · English (professional)
